VisitCleared diagnostic
exposure report

Floor disclaimer

Estimated from billed 835 claims only; visits that died unverified and were never billed, and claims rejected before adjudication, are invisible here — the true exposure is greater than or equal to this number.

Confidence tiers

High

A clean, unambiguous match, such as a verification-specific remark code.

Medium

A rule match that wants light human confirmation.

Low

A state-specific or inferred match, flagged as lower certainty.

Confidence note

For a state we have not fully modeled yet, a line is capped at low confidence and flagged, never overclaimed; a fully modeled launch state keeps its full confidence.

File inventory

denials.835	Parsed	Could not be read as an 835 remittance file.
